### H/F/X/Y Quad MAS

#### The XVT UHF Quad-MAS H/F/X/Y

- Dedicated 19 F and 1H channels for simultaneous operation of <sup>1</sup>H and <sup>19</sup>F
- <sup>1</sup>H and <sup>19</sup>F high-power decoupling with amazing isolation, efficiency, stability, and VT range
- 2 Broadband channels, X/Y
- Extended VT range: -180 to +150  $^{\circ}$ C

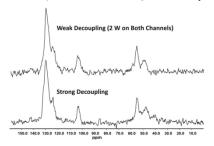

#### **ULT UHF HFXY DNP is coming**

MAS on a Previous Generation 3 mm Doty H/F/X/Y 500 MHz Probe In the 4 Channel Tuning Mode

<sup>13</sup>C observe, simultaneous <sup>1</sup>H/<sup>19</sup>F decouple

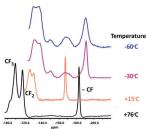

(Also H/F or **H/F/X Probes**)

<sup>13</sup>C NMR of fluoropolymer, Viton, 24 kHz MAS, with simultaneous <sup>1</sup>H and <sup>19</sup>F decouple

**Expansion of the Region** 100 to 220 ppm of the <sup>19</sup>F **MAS of Viton** 

**Acknowledgement:** NIH R44GM119937

## Previous Generation H/F/Y/Z

500 MHz, NB, H/F/X/Y 3 mm MAS Probe with 2 Broadband Channels

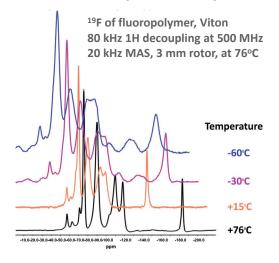

#### Fluorine Quad H/F/X/Y HR-Solids

Solids Quad Resonance
4 Efficient, High Power RF Channels

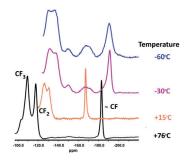

- Dedicated <sup>19</sup> F and <sup>1</sup>H channels for <sup>1</sup>H and <sup>19</sup>F operation simultaneously
- Enables <sup>1</sup>H and <sup>19</sup>F high-power decoupling (and <sup>2</sup>H decoupling on the X channel)
- 2 Broadband channels, X/Y
- High resolution
- Extended VT range: NB -150 to +150°C

MAS on a Previous Generation 3 mm Doty H/F/X/Y 500 MHz Probe In the 4 Channel Tuning Mode

#### Temperature Dependence of <sup>19</sup>F NMR - Viton

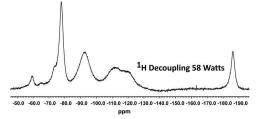

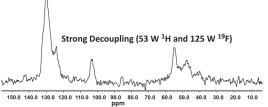

Expansion of the Region 100 to 220 ppm of the <sup>19</sup>F MAS of Viton

<sup>19</sup>F MAS (18 kHz) of Viton No increase in noise during decoupling <sup>13</sup>C MAS (24 kHz) of Viton, <sup>1</sup>H and <sup>19</sup>F decoupling with low noise and excellent isolation between the <sup>1</sup>H and <sup>19</sup>F channels

## NB H/X or H/X/Y MAS Probes

For S/N, RF field Strength, and Extended Temperatures. H/X or H/X/Y.

- Low E <sup>1</sup>H Coil
- High-Q solenoid for X and Y
- Highest S/N:

4 mm <sup>13</sup>C – S/N of 205:1 on 50 mg of Glycine 3 mm <sup>13</sup>C – S/N of 103:1 on 18 mg of Glycine S/N of 258:1 on 18 mg of HMB (spectrum below)

 Highest rf Field Strength and Efficiency:

 $^{13}$  C  $\pi/2$  pulse of 1.3  $\mu s$  with only 640 W at 125.7 MHz. 3 mm Bmax with H/X tuning.

Wide VT Ranges
 Standard VT Range
 -80°C/+120°C for NB
 Extended VT Range
 -150°C/+150°C for NB

Low Thermal Gradients

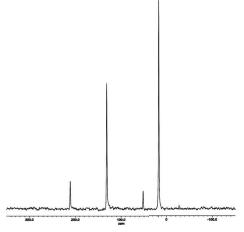

# NB 3 mm Bmax MAS with low E outer decoupling coil, and inner X/Y solenoid.

#### MQMAS on kyanite, 3 mm Bmax

Artifact free MQMAS 2D spectrum on 5/2 <sup>27</sup>Al transition of kyanite at 500 MHz.

HMB (18 mg) 3 mm Bmax CP/MAS <sup>13</sup>C at 500MHz H/C tuning, S/N 258:1

During CP  $\gamma B_1/2\pi$  was 58.5 kHz with powers of  $^1H$  at 92.5 W and  $^{13}C$  at 53.0 W.

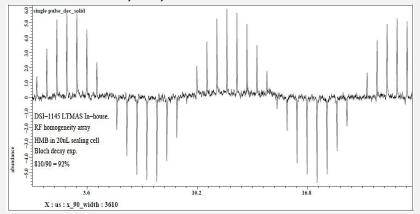

## Doty NB H/X or H/X/Y MAS Probes

#### For Superior S/N, Homogeneity, and Fast Stable Spinning

Compatible with Bruker, JEOL, Agilent, Tecmag, and Q.One

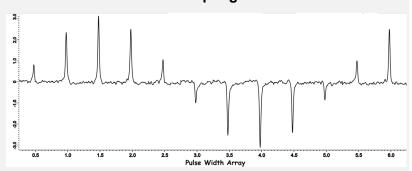

#### Extraordinary Homogeneity

4 mm Bmax MAS, H/X, <sup>13</sup>C at 500 MHz

#### Exceptional RF Field Strength

3 mm Bmax MAS, H/X, 500 MHz,  $^1H$  1.3  $\mu s$   $\pi/2$  for  $^{13}C$  with 640 W and 75 kHz  $^1H$  decoupling

Nutation plot for <sup>13</sup>C Bloch decay using HMB. The methyl carbon is the only resonance displayed.

#### Narrow Bore Sample Temperatures:

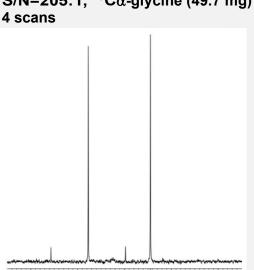

- -80°C to +120°C for Standard VT Range
- -150°C to +150°C for XVT (extended VT)

#### MAS Spinner Assembly Options

3 mm DI-3 Drop-in 28 kHz 4 mm DI-4 Drop-in 18 kHz 4 mm XC4 22 kHz 5 mm XC5 18 kHz

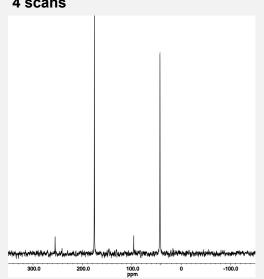

#### Highest S/N

4 mm Bmax CP/MAS at 500 MHz S/N=205:1,  $^{13}$ C $\alpha$ -glycine (49.7 mg)

<sup>1</sup>H with 97.4 W and <sup>13</sup>C with 53 W. <sup>1</sup>H decoupling 97.4 kHz TPPM, ramped-CP at 62 kHz for 7.5 ms, 10 kHz MAS.

 $^{1}H$  with 97.5 W and  $^{13}C$  with of 53 W. During CP,  $\gamma B_{1}/2\pi$  was 58.5 kHz. 10 kHz MAS.

## WB H/X or H/X/Y Ultra-Range MAS Probes

Standard VT or
Standard VT or
Low Temperature
NAS
Ultra-Range MAS
WB Ultra-Range

The Low Temperature model provides operation down to -180 °C. 3 mm only.

- For WB Magnets Only, 300 MHz to 700 MHz
- Broad Temperature Ranges
   Standard VT: -140 °C to +170 °C
   Low Temperature (LT): -180 °C to +170 °C
- Broad Tuning Range
   with tuning inserts <sup>31</sup>P to <sup>103</sup>Rh
- Double-Tuned <sup>1</sup>H/X or Triple-Tuned <sup>1</sup>H/X/Y
   Note: the <sup>1</sup>H/X/Y triple-tuned probe can be converted to double-tuned <sup>1</sup>H/X by disconnecting the third channel.
- Broad Range of Standard VT Spinner Options
   3, 4, 5, or 7 mm
- Low Thermal Gradients, ≤ 4 °C Over Sample Length

## HT - WB H/X or H/X/Y Ultra-Range MAS Probes

# Extended VT or Extended VT or High Temperature NAS WB Ultra-Range MAS

The High Temperature model provides operation up to +500 °C. 5 mm only.

- For WB Magnets Only, 300 MHz to 700 MHz
- Broad Temperature Ranges
   Extended VT (XVT): -140 °C to +260 °C
   High Temperature (HT): -100 °C to +500 °C
   5 mm Only
- Broad Tuning Range
   with tuning inserts <sup>31</sup>P to <sup>103</sup>Rh
- Double-Tuned <sup>1</sup>H/X or Triple-Tuned <sup>1</sup>H/X/Y
   Note: the <sup>1</sup>H/X/Y triple-tuned probe can be converted to double-tuned <sup>1</sup>H/X by disconnecting the third channel.
- Broad Range of XVT Spinner Options
   3, 4, 5 or 7 mm
- Low Thermal Gradients, ≤ 4 °C Over Sample Length

## Liquids NMR and PFG/Diffusion

- NB or WB.
- Extended Temperature (XVT) to +300 °C with sample size
   5 mm
- Standard VT -40 °C to +60 °C with sample sizes
   5 mm to 20 mm
- Many tuning options:
   H/X/lock, H-F/X/lock,
   H/C/N/lock, H/F/X/lock.
- Pulsed gradient >3000 G/cm with water cooled Z-gradient.

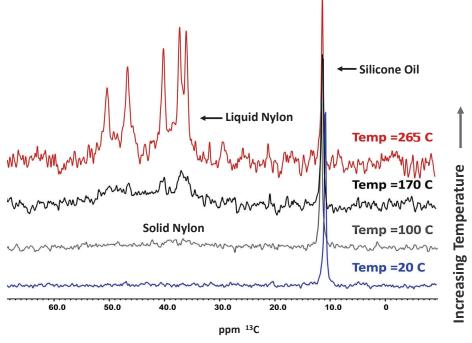

XVT Liquids Probe with Z gradient coil H-F/X/<sup>2</sup>H Lock 300°C, 5mm NB

HR Liquids NMR Probe without gradient

Access a wide range of temperatures. Shown here is the temperature dependence of the <sup>13</sup>C spectrum of Nylon 6,6 in silicone oil.

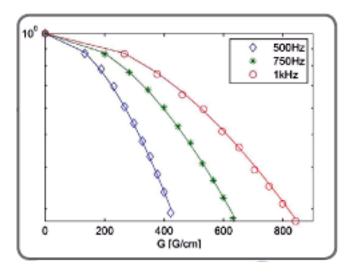

- > High magnetic fields up to 900 MHz
- Measures lowest diffusion coefficients to 10<sup>-15</sup> m<sup>2</sup>/s
- > Optimized for minimal eddy currents
- > Highest strength gradients
- Best thermal stability
- > Excellent mechanical stability
- Exceptional gradient uniformity (~1%) over a large sample volume.
- > High spectral resolution
- > 1H/X, direct or indirect detect

#### Sample Temperature Ranges:

Std VT range, NB or WB: -100/+160C with water cooling Std VT range, NB or WB: -50/+80C with air cooling 5mm XVT, NB or WB, 20-40c: -140/+300C, water cooling 8mm XVT, NB or WB, 20-40c: -100/+160C, water cooling

## Liquids PFG/Diffusion Z Gradient Probes

#### Doty 300MHZ, 16-38 Z Gradient, Diffusion Probe Results

Experimental (markers) and fitted (lines) signal attenuation as a function of diffusion gradient amplitudes and frequencies; oscillating gradient spin echo (OSGE).

HR Liquids NMR Probe

## Custom Liquids High-Resolution NMR Probes

PFG, Inverse, MRI, Quad-Tuned and more

Doty Scientific, an established leader in large-sample high-resolution (liquids) coil technology and solids NMR, is using the latest in laser cutting, compensated laminates, and thermal gradient minimization with alumina coil forms to bring its Super-B<sub>1</sub> coils to the field of high-resolution liquids NMR.

Like the 20 mm probe shown on the right, larger samples, higher temperatures, and special tuning are customary for Doty probes.

A few other distinctive probes we have provided are:

- 5 mm H/X/lock, low gamma liquids, XVT to 260 °C, 400 WB
- 5 mm H-F/X/lock diffusion, 3000 G/cm, XVT to 140 °C, 400 WB
- 15 mm H/X liquids, low <sup>13</sup>C background, 600 WB

A 20 mm H/X Liquids Probe

#### **Examples of Custom Liquids High-resolution Probes**

18 mm	<sup>1</sup> H/X liquids 600 NB, Perfusion, low <sup>13</sup> C background,

20 mm	<sup>1</sup> H/X/lock, 400 MHz NB
5 mm	<sup>1</sup> H/X/lock, 750 MHz NB 3000 G/cm PFG

#### Research Results

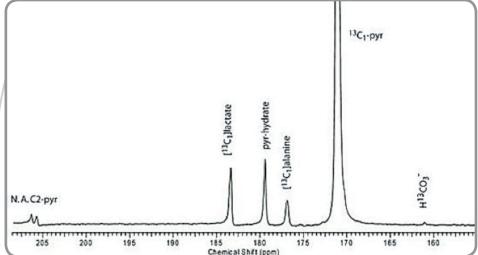

Results at the Advanced Imaging Research Center, Southwestern Medical Center at Dallas, Texas, USA, demonstrate the quality and versitility of Doty liquids probes.

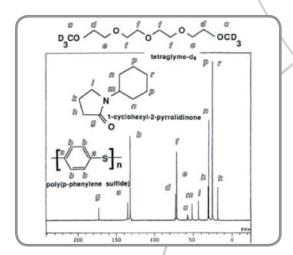

<sup>13</sup>C spectrum for a perfused heart in DOTY 25 mm <sup>1</sup>H/X liquids probe at 9.4 T.

The heart was perfused with hyperpolarized 2 mM [1-13C] pyruvate and natural abundance, unpolarized 2 mM octanoate. The metabolic products lactate and

alanine are visible after a single 66 degree detection pulse. The octanoate effectively blocks production of the bicarbonate, which would normally be about the size of the lactate. The linewidths were ~12 Hz for <sup>13</sup>C on the beating heart.

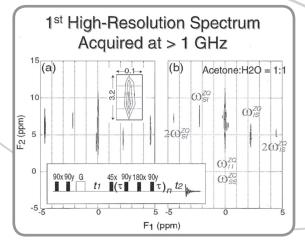

Spectrum courtesy of: Dr. Matthew E. Merritt, Assistant Professor, Advanced Imaging Research Center, Southwestern Medical Center at Dallas.

High-Temperature High-Resolution <sup>13</sup>C spectrum 30 wt % PPS2 in 1-cyclohexyl-2-pyrolidinone at 270°C.

Courtesy of B. Wade and A. S. Abhiraman, Georgia Institute of Technology and by S. Wharry and D. Sutherlin, Phillips Petroleum.

400 G/cm PFG at 14 T
Exceptional recovery
High resolution
Wide VT range
H/X/Y/lock
NB or WB Probes

500 MHz, H/X 4 mm NB MAS Probe with Magic Angle Gradients

#### **MAS NMR data:**

- A) Radio frequency driven rotational resonance (RFDR) <sup>13</sup>C/<sup>13</sup>C correlation spectrum of uniform <sup>13</sup>C, <sup>15</sup>N-Leucine powder, *4 scans*;
- B) Inverse <sup>1</sup>H detected heteronuclear multiple quantum correalation spectrum of 4-cyano 4'-biphenyl nematic liquid crystals in natural abundance, *2 scans*;
- C) Single-scan diffusion-ordered 2D spectra of 4-cyano 4'-biphenyl in chloroform and water.

Spectra: B. Das

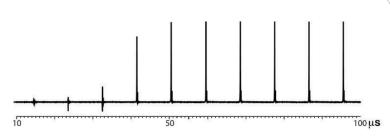

#### **MAS-MAG Applications**

Low-E Inverse-Detected

#### <sup>1</sup>H MAS Diffusion NMR

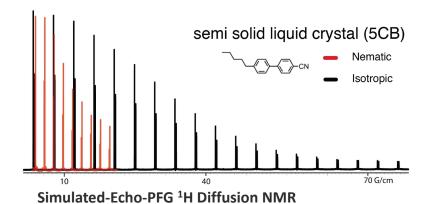

Using a 4 mm <sup>1</sup>H/X Probe

Gradient Recovery Time (ms) at 100 G/cm PFG

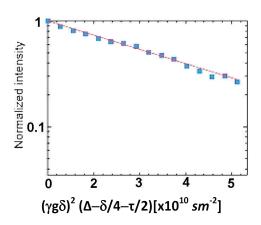

For MAS Diffusion and Gradient Spectroscopy

#### <sup>19</sup>F MAS Diffusion NMR

Using a 4 mm <sup>1</sup>H/<sup>19</sup>F/X Probe

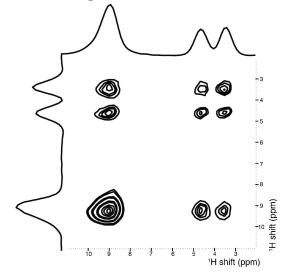

PGSE decay curve with diffusion time of 30 ms. The self-diffusion coefficient for  $F^-$  at 40°C in polymeric fluoride ion conductor was measured to be in the  $2\times10^{-10}$  -  $4\times10^{-10}$  m<sup>2</sup>s-<sup>1</sup> range depending on the type of material.

Doty Scientific would like to thank Dr. F. Ziarelli and Prof. Dr. S. Viel, Aix-Marseille Université. Pasquini et al., ChemPhysChem. 2015, 17, 363.

#### <sup>1</sup>H CRAMPS NMR

Using a 4 mm <sup>1</sup>H/X Probe

Two-dimensional <sup>1</sup>H detected homonuclear correlation spectrum of Glycine powder.

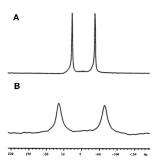

300 MHz <sup>1</sup>H spectrum was recorded under 7 kHz MAS and wPMLG3 acquisition.

## SAS – Switched Angle Spinning Probes

In response to the new applications for SAS, we have developed a SAS probe with more durable, fatigue-resistant leads – for up to 500,000 flips before replacement. Precise computer control of angle setting (via a servo motor) results in magic angle setting reproducibility during SAS of >0.015°, with a 60 ms settling time. Tuning can be H/X or H/X/Y with 3, 4, or 5 mm spinners. For Wide bore magnets only. A manually controlled goniometer probe for Variable Angle Spinning (VAS) is also available for WB magnets.

<sup>2</sup>H Quadrupolar Splitting for D<sub>2</sub>O in Bicelles.

- **A)** spectrum for sample rotating at  $\theta$ =80°.
- B) spectrum on rotating sample obtained with SAS from  $\theta$ =80° to  $\theta$ =10°.

Laura Holte, Doty Scientific, Inc.

#### Wideline Probes

The wide range of available options listed below offers exceptional versatility, usually all you'll need.

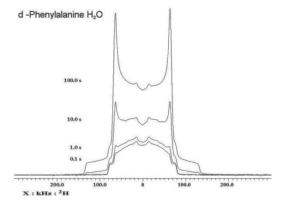

However we also offer unique probes – such as *the wideline 3 mm narrow bore H/X probe* (shown below) *with a temperature range* to 250 °C *and impressively low* <sup>1</sup>*H background signals*.

#### Available options:

- ♦ 3 mm, 4 mm, 5 mm, 7 mm, 8 mm, or 10 mm (WB only) sample
- ♦ Wide Bore or Narrow Bore probe
- ♦ -80°C to 120°C, Standard VT for NB
- + -160°C to 200°C, XVT for NB
- ◆ -110°C to 150°C standard VT for WB
- → -170°C to 250°C, XVT for WB
- ♦ H/X, Double resonance with multinuclear observe
- ♦ H/X/Y, Triple resonance with multinuclear observes
- A low cost <sup>2</sup>H only option is available, which can be tuned for use at more than one field strength

A probe is delivered with ten sample containers and 20 plugs.

<sup>2</sup>H Quad Echo data on a JEOL ECA600 and a Doty <sup>2</sup>H Wideline Probe tuned for Use at 9.4, 11.7, and 14.1 T.

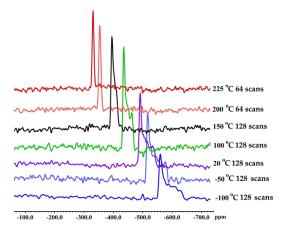

The times above indicate relaxation delay. The probe is tunable to <sup>2</sup>H at 400, 500, or 600 MHz <sup>1</sup>H freq. Courtesy of Michael Frey, JEOL USA.

#### Wideline 3 mm NB H/X Probe to 250 °C

- Ceramic Housing and Coil Support Enables:
  - High Temperature Operation
  - Protection of the Coil and Sample
  - Minimal Background Signals
  - (Ultra Low <sup>1</sup>H Background Option)
- High-power decoupling
  - 1.5  $\mu$ s <sup>1</sup>H  $\pi$ /2 pulse at 600 MHz with 230 W
  - 2.5  $\mu$ s <sup>13</sup>C  $\pi$ /2 pulse at 150.9 MHz with 350 W
- H/X, Double resonance with multinuclear observe
- H/X/Y, Triple resonance with multinuclear observe
- Extended VT range: NB -110 °C to 250 °C (WB -110 °C to 320 °C)

#### Sample temperature measured by <sup>207</sup>Pb(NO<sub>3</sub>)<sub>2</sub> chemical shift

#### Bench Spinner Assemblies

Bench spinners enable researchers to spin-pack samples and test sample balance on the bench. Some stators in bench spinner assemblies have thicker walls for added durability.

Bench Spinners \*

\$14,128	# 95701
	# 95723
13,560	# 95719
	# 95720
	# 95715

A spin rate preamp and cable (shown above) is supplied with the bench spinner and included in the price. A 40% discount will be given on a bench spinner ordered on the same purchase order with a corresponding probe.

#### Spin Rate Detection and Regulation

# 99560	Spin Rate Detection Preamp / Power Supply 115 V	SE SE SECONDARY	\$3270
# 99455	Spin Rate Detection Preamp / Power Supply 230 V	PPR CATECTON HIRE AND	\$3270
# 98930	Spin Rate Detection Preamp Cable for Optics		\$106
# 98931	Spin Rate Detection Preamp Cable for Tribo		\$106
# 69300 Digital Frequency Counter			\$683
# 91581	Filtered Dual Air Regulator		\$3,327

(US\$ -Foreign prices higher, plus taxes.)

#### Temperature Control Accessories

#### **Extended Temperatures**

Doty probes have variable temperature capabilities, and extended temperature options are also available.

#### Wide Temperature range:

- -80°C to +120°C for NB Std VT
- -140°C to +170°C for WB Std VT
- -150 to +150°C NB XVT (extended VT)
- -150 to +250°C WB XVT (extended VT)
- -170°C LXVT (NB and WB low extended VT)

(with a Doty temperature controller). To extend the temperature range, we add extra insulation and thermal baffles, utilize special materials, add additional room air, and in some cases, add extra dewars to the probe.

#### Probe Exhaust Dewar

A Probe Exhaust Dewar is **required for sample temperatures above 160°C or below -100°C** (except with cryogenic, high-temp, and a few other special probes) which have a different exhaust system. The exhaust dewar is included in extended VT options (described above) but may be ordered separately. Please supply the probe serial number when ordering to ensure that the proper dewar is supplied.

# 95980 Probe Exhaust Dewar.....\$ 1010

#### 50-Liter Liquid Nitrogen Dewar

This dewar is intended to be used with the Doty Cold-Gas System. (A Nitrogen Dewar already owned or purchased locally may be used if compatible with the cold-gas system, however specifications must match.)

#### # 86020 50-Liter Liquid Nitrogen Dewar.... \$2140 Cold-Gas Supply Systems

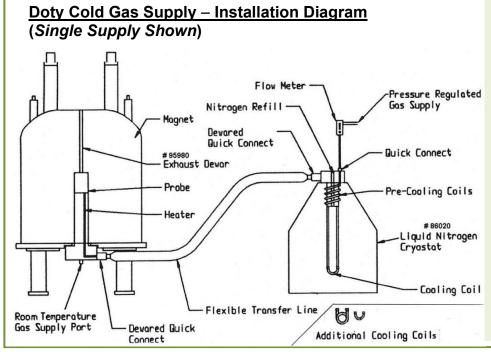

Doty cold gas supplies include a heat exchanger with one, two or three intertwined pre-cooling coils; appropriate cooling coil sets; and one, two or three transfer lines to carry the cooled gas to the probe.

(The pre-cooler counterflow heat exchanger in the neck of the storage dewar greatly improves cooling efficiency – an important consideration for extended runs.)

The heat exchanger connects to the Doty probe with flexible, foam-insulated transfer lines with fully dewared quick connects. This system provides efficient cold gas supply for temperatures down to -150°C. The cold gas supply shown below is connected to a probe at one end and connected to a flow meter and regulated gas supply on the other. This system is designed to be used with the **standard 50-liter nitrogen dewar** and **probe exhaust dewar**, (listed in the left column) both of which **must be ordered separately**.

# 99860 Single-Supply Cold-Gas System ... \$4,040 This cold-gas supply is for, standard speed or wideline probes and other single-supply applications. Also for OptiMAS<sup>TM</sup> cold zone cooling when VT gas is supplied by a separate system.

# 95970 Dual-Supply Cold-Gas System ..... \$5,940 For spinning with separate bearing and drive or for other dual-supply applications. (Includes two intertwined precooling coils, two cooling coil sets, and two transfer lines.)

#### Accessories For 3mm DI (Drop-in) Spinners

We have hew, more robust turbines for DI-3 and DI-4 rotors. We are phasing these in beginning with Torlon and GFT. The new design includes modified turbine blades and a threaded hole with a different thread pitch thus necessitating a new Insertion and Removal Tool with matching thread. (New spacers will have the new thread as well.) We will continue to supply which-ever turbine puller you need (or both).

Item	Turbine and Spacer Insertion and Removal Tool	Thread
DI-3 Turbines		Part No: 06027 0-80 THREAD
Note how the turbine blades are connected to form a ring around the threaded hole.  New DI-3 Turbine		Part No: 03516 M1.2 – 25 THREAD

#### DI-4 Sealing Cells for Liquids and Semi-Solids

Sealing cells are for use inside DI thin-walled ceramic rotors. The plastic cells are available in Kel-F with teflon plugs for proton NMR, or in ultern with polyvinyl-chloride (PVC) plugs for fluorine NMR.

All cells are suitable for long-term sample storage without loss. They may be used with all common solvents, including acetone, alcohols, benzene, DMSO, ethers, methylene chloride, strong bases, and most strong acids – as long as the sample density does not exceed the density of the plug (2.2 g/cm³ for teflon, 1.4 g/cm³ for PVC).

- > For material specifications: http://dotynmr.com/download/Materials-and-Speeds-Data.pdf
- Thick wall rotors and GFT or Torlon caps are provided for **fastest spinning** and ease in packing. Thin wall rotors and caps are available for maximum signal to noise. The maximum speed of thin wall rotors is about 50% the speed of thick wall rotors. Long caps are provided for highest homogeneity and rf field strength.
- ➤ For XC probes, (beginning in 2000) XC "Slow MAS" is provided for stable very slow spinning of tissues, liquids, and CC by a change in "nozzle caps" only. The same turbine caps are used. All choices of XC rotors and caps may be used with slow spin nozzle caps. A 50% reduction in maximum spinning speeds should be expected for each type. See page 4 for more specifications.

XC, SuperSonic, DI, High Speed, and Standard accessories are <u>not</u> interchangeable <u>unless specified</u>. <u>If unsure about correct supplies, contact us with the probe DSI-serial number and we can help.</u>

(US\$ - Foreign prices higher, plus taxes)

#### **Accessories for XC**

SuperSonic (SS) and XC rotors and caps are different. Check the rotor length to be sure you order the correct parts.

		7 mm Red Threaded End-Cap Puller for 7 mm O-ring Caps, (5-44 Thread)	96250	120
		For 7 mm Macor caps for Macor rotors - Black Threaded Cap Puller (4-48 Thread)	96190	120
96500	176	Sample Packing Tool Set for Silicon Nitride and Zirconia Rotors	96520	176
4710	55	Packing Tamp for Caps with Axial Screws	4700	55

<sup>\* &</sup>lt;u>Specify on the order</u>. – Some prefer to insert o-ring turbines by twisting them in by hand. However, o-ring turbine caps can be ordered <u>with threaded holes</u> to be inserted and removed with the threaded cap puller. (Plug caps must be removed with the threaded tool.) Front turbine caps can also be ordered <u>with an axial out-gassing hole</u> for higher temperature work or to remove air bubbles. *O-ring caps can be used for liquids, for sealing, or for some VT.* 

#### **Doty Spinner Assembly Materials**

Doty spinners utilize super-precision, wear-resistant ceramic stators of silicon nitride or zirconia. MAS spinner materials must be chosen carefully based on background signals and temperature ranges. Ceramic rotors and plastic caps of various materials are available to provide fast spinning with limited background problems.

		Material Specific	cations	Turbine Cap Specifi	cations
Material	Upper Temp	Major Constituents	Minor Elements	Recommended Use	Cap VT Operation Range
Silicon Nitride	1400°C *	98% Si₃N₄	2% Y₂O₃, .005 AI		
Zirconia	650°C *	94 ZrO <sub>2</sub> , 4 Y <sub>2</sub> O <sub>3</sub>	Hf, 0.3% Si, .02 Al		
Macor	650°C *	Al, Si, O, B, K	2% F, Mg		
Kel-F	130°C *	F, C, Cl		proton & carbon studies	-20°C to 70°C.
GF Torlon (30% Glass)	260°C*	H, C, O, Si	Ti, N, F	fast spinning, wide temperature range, wear resistant	-120°C to 160°C (glued in with epoxy -170°C to 250°C)
Glass Fibers in GFT		SiO <sub>2</sub>	CaO, MgO, Al <sub>2</sub> O <sub>3,</sub> B <sub>2</sub> O <sub>3,</sub>		
Torlon	260°C*	Н, С, О	Ti, N	fast spinning and low <sup>29</sup> Si or low <sup>19</sup> F	-30°C to 80°C
Aurum	240°C *	Н, С, О	N	fast spinning and low <sup>29</sup> Si or low <sup>19</sup> F	-30°C to 80°C
Vespel	300°C *	Н, С, О	N	special extended VT caps	-270°C to 240°C

<sup>\*</sup> Note: This chart represents <u>only</u> material characteristics. Check the Probe Specifications.

Non-spinning parts can tolerate different temperatures than turbine caps spinning on rotors.

#### Spinner Assembly Materials - Plastics

**GFT (Glass-fiber-reinforced Torlon)**: Glass-fiber-reinforced Torlon grade 5030 will be used for some MAS turbine caps for greatly improved VT performance and all-around better reliability and performance. This new material stands out from the rest with respect to isotropic thermal expansion (only 16E-6/°C), tensile strength at 200°C (120 MPa), and heat distortion temperature (282°C). It also has rather low moisture absorption, high wear resistance, and high impact strength. These caps are the most wear resistant and have the widest temperature range. GFT is not recommended for proton studies, or for some silicon and some carbon studies. Caps may be used from -120°C to 160°C repeatedly (or when glued in with epoxy from -170°C to 250°C).

**Torlon:** Torlon is used for fastest spinning of DI3 turbines. This green thermoplastic polyamide-imide, has exceptional chemical resistance. Caps may be used from -30°C to 80°C repeatedly. *The caps may be used once to higher temperatures but they will be too loose after that.* (In non-spinning parts of the spinner assembly, the upper temperature limit is 260°C.) Torlon is not recommended for proton studies or for some carbon studies. As Torlon has a relatively high moisture absorption rate .03%/24hours, it may be periodically necessary to bake out the turbine caps or tip caps at 50°C for one hour. This is necessary if the caps become too tight. (The opposite condition is much less likely. However, if one is in a very arid area or operating in a low moisture environment, the caps may have to be soaked in a liquid too make them tighter.)

**Kel-F**: A translucent white plastic, Kel-F is background free for all nuclei except F, Cl, and C. Kel-F is also excellent for carbon studies since the strong fluorine coupling effectively broadens the Kel-F carbon signal, and there are no protons to cross polarize. Kel-F is not as strong or wear resistant as the other cap materials and is thus restricted to lower spinning speeds. Kel-F turbine caps can be used at temperatures from -20°C to 70°C. (In non-spinning parts of the spinner assembly, the upper temperature limit is 130°C.)

**Aurum\*:** This material is no longer available in appropriate form for our manufacturing, so Aurum is being replaced by Torlon. Aurum will be supplied if requested and is available, but supplies are severly limited.

This dark brown to black thermoplastic polyimide has excellent dielectric properties. Aurum can be used for low silicon applications when fast spinning is desired. Aurum is supplied for some probes designed for fluorine studies and other applications where carbon is not a problem. Turbine caps may be used from -30°C to 80°C repeatedly. (In non-spinning parts of the spinner assembly, the upper temperature limit is 240°C.)

**Vespel:** This brown plastic is used for some extended temperature caps and for non-spinning spinner assembly parts that will reach temperatures over 200°C. Vespel is not recommended for proton studies or for some carbon studies.

#### **O-Ring Caps**

#### For wet samples, air sensitive samples, and variable temperatures

O-ring Caps: Turbines and plug caps with dual Viton o-ring seals are available for Macor, silicon nitride, and zirconia rotors. Macor rotors, (available only for standard and high speed probes) are recommended for wet samples, air sensitive samples, and temperatures from -60°C to 250°C. A single (rear) cap with o-rings is used with a Macor rotor. However, if faster spinning is critical, VT and air-sensitive experiments can be done in silicon nitride or zirconia rotors using o-ring-sealed cap pairs. O-ring turbine caps are normally inserted and removed by hand. Turbines with threaded holes can be ordered with a threaded insertion tool for use when loading samples in a glove box (and to remove standard speed plug caps.) Caps can be ordered with axial outgassing holes for higher temperature work or to remove air bubbles.

Although the supersonic o-ring caps can be used for air sensitive samples in XC5 and XC7 probes, XC sealing cells are usually preferred.

- **Kel-F O-ring Caps:** ...... Temperature range with o-rings: -45°C to 80°C.
- Aurum or Torlon O-ring Caps: ...... Temperature range with o-rings: -45°C to 120°C.

#### **Extended Temperature Caps**

- DI, XC4 and XC5 probes (and most supersonic) use Glass-fiber-reinforced Torlon (GFT) glued in.

  GFT if glued in: ............ Temperature range: -170°C to 250°C
- \* Torlon is replacing aurum for most parts, depending on availability. Torlon can be used as a substitute for aurum as the NMR characteristics are similar.

#### Spinner Assembly Materials – Ceramics

**Silicon Nitride:** With a density of about 3.18 g/cm³ and a (working) tensile strength of 700 MPa, silicon nitride has the highest strength-to-weight ratio of any ceramic available today. Its hardness and toughness make it very difficult to grind, but it has the lowest dielectric loss and lowest permittivity of any engineering ceramic, making it the best choice for high frequencies. A HIPed (Hot Isostatic Pressed) variety is available with improved strength and dielectric properties. Its superior electrical properties make it the preferred material for most applications (often, even for silicon and nitrogen), because of silicon's long T₁ and nitrogen's low natural abundance. The color is black. The only additive or impurity greater than 200 ppm in this new material is yttria. Silicon nitride stators, housings, and rotors are available in all sizes. This material is required for fastest spinning.

**Zirconia:** This yttria-stabilized, high-purity material is glossy white and has a density of about 6 g/cm³ and a (working) tensile strength of 700 MPa. Alumina content can be kept below 100 ppm. Zirconia is less expensive than silicon nitride, but the safe spinning speed for zirconia rotors is lower than that of silicon nitride.

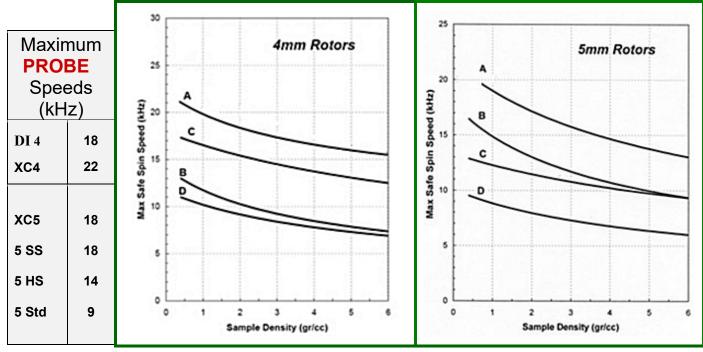

**Macor:** This white, machineable, boro-silicate glass-ceramic is loaded with synthetic mica to inhibit crack propagation. It is easily machined with conventional tooling. Macor housings may be provided for carbon and proton studies at temperatures over 160°C in our standard speed MAS probes. Macor is useable up to 650°C, but it has very poor thermal shock tolerance. Macor rotors are only available for the high speed and standard spinners. Macor rotors are made with a thicker wall and are machined with an integral turbine at one end. Standard speed rotors require a plug-cap at the open end, while high-speed rotors require a rear turbine. Macor rotors are recommended for wet samples, air-sensitive samples, and temperatures from -150°C to 250°C. Major constituents: Al, Si, O, B, K, F.

**Boron Nitride:** Boron Nitride is not used in Doty probes. However, the hexagonal hot-pressed variety, with 6% calcium borate binder, is easily machineable and is used for disposable inserts for the high-temperature ceramic rotors for the Doty high temperature probe (700°C). The material is soft enough to scratch easily and may absorb up to 1% moisture.

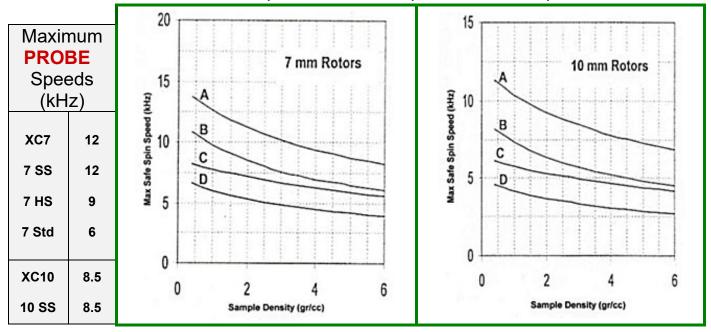

#### Doty MAS Spinning Speeds

#### 3 mm Maximum MAS Spinning Speeds

Use the lower of the speeds listed: considering the rotor, the cap, the temperature and the density maximum speeds

Rotors: The maximum speed must be reduced as the density of the sample increases.									
DI3 Silicon Nitride Rotors	28 KHz	For sample density = 1							
Maximum Speed	26 KHz	For sample density = 3							
Maximum Spinning Speeds (kHz) For Caps at Room Temperature									
Cap Style	DI-3 Spinning at	Cap Material Temperature							
Cap Style	Room Temperature	Range							
Torlon Front Turbine Cap	28 KHz	-30° to 80°C							
Torlon Rear Tip Cap	28 KHz	-30 10 80 C							
GFT* Front Turbine Cap	26 KHz	-120° to 160 °C							
GFT* Rear Tip Cap	26 KHz								
Aurum Front Turbine Cap	18 KHz	0001 0000							
Aurum Rear Tip Cap	18 KHz	-30° to 80°C							
Kel-F Front Turbine Cap	11 KHz								
•		-20° to 70°C							
Kel-F Rear Tip Cap 11 KHz									
*Maximum Spinning Speeds (KHz) For Caps at Extended Temperatures									
Spinning speeds must be reduced for higher or lower temperatures.									
Glass Filled Torlon (GFT)*	14 KHz At -80°C	-120° to 160°C							
Glass Filled Torlon (GFT)*	14 KHz At +120°C	-120° to 160 °C							

<sup>\*</sup> Note: **GFT caps** can be used up to 250 °C or down to -170 °C if they are glued in with epoxy. **However the probe must be rated for these extended temperatures.** 

#### Typical Specifications for Solids Probes

CRAMPS, Wide Line, MQ/MAS, H/F/X or F/X MAS,

#### Double-tuned, or Triple-tuned Probes

Although the versatile XC MAS probe can be supplied with one to four channels and upgraded at a later date, many customers prefer to order dedicated-purpose probes for lower cost or for specific requirements. Doty provides dedicated **CRAMPS**, **WIDELINE**, **Double-tuned**, **Triple-tuned**, **MQ/MAS**, **and HFX MAS**, to name a few. The following table provides typical specifications for some of these probes for the NB 500 MHz spectrometer. Specifications for other probes are available upon request.

500 MHz NB Solids. Standard Resolution. (For 40 mm RT shim bore, 5 mm sample.)

All the above data are for 5 mm. S/N at RT; NF=1.2. **A:** non-spinning CP at 90° on HMB. **B:** CPMAS on glycine. Specifications listed for Triple Resonance probes are for DT configuration. For "High salt" probes, maximum X-channel B<sub>1</sub> is degraded during CP by ~20%, but ~40% for "Moderate salt" probes.

Also avaliable with SuperSonic Spinner. Specifications subject to change.

#### Ordering Information

#### **Probes Are Available for All Spectrometer Users**

Bruker + JEOL + Tecmag + Agilent/ Varian/ Chemagnetics
 + Siemans + GE + Custom

#### **Pricing**

- ◆ There is a \$50 minimum per order.
- ◆ For probe prices, please request a quotation. This enables us to confirm prices and specifications.
- Shipping and handling charges will be prepaid and added to the invoice.
- ◆ Pricing is for U.S. domestic sales and subject to change without notice. Add 5% plus customs duties for Canada.

Add 15% plus customs duties for foreign sales.

Volume Discounts For Rotors, Caps and Other Small Items							
Price Per Item	Quantity Per Line Item	Discount					
under \$ 100	4-9	10%					
under \$ 100	10 or more	20%					
\$100 - \$ 400	4-9	10%					
\$100 - \$ 400	10 or more	15%					
\$401 - \$1000	4-9	5%					
\$401 - \$1000	10 or more	10%					

#### **Doty Scientific Warranty Information**

DSI warrants that its products will conform to the specifications quoted when used with reasonable care within specifications, and in conjunction with properly performing instruments, for a period of one year from the date shipped. Exceptions: (1) Rotors and turbine caps are not covered under warranty because rotors and caps may be damaged by IMPROPER handling. Please follow the instructions in your manual. (2) Probe VT components may not be covered under warranty unless the probe is used with a DSI VT controller. Products requiring service or modification may be returned with freight, insurance, and handling fees prepaid. DSI will return repaired products freight prepaid. DSI assumes no responsibility for the repair or modification of products not provided by Doty Scientific.

MasterCard and Visa Are Accepted
